We help you
make your dream
of motherhood
COME TRUE

Welcome to Institut Marquès

- Centre of international renown in the field of Assisted Reproduction with centres in Barcelona, Clane, Dublin, London, Kuwait and Milan.

- In Vitro Fertilisation with Egg Donation can be carried out in our clinic in Ireland or in Barcelona.

- Our clinic in Clane is located 30 Km from Dublin, offers all assisted reproduction services and has its own lab. IM also has consulting rooms in London and Dublin.

- A team of highly qualified specialists offers a service based in excellence.

- Own oocyte and sperm bank –we match the most suitable donor for the patient according to the physical characteristics and Rh.

- Pioneers in the adoption of embryos resulting from couples that had a successful In Vitro Fertilisation cycle – in many cases using donor eggs or donor sperm. If these couples do not wish to

have more children, the embryos will then become part of our programme, which is the broadest in the world.

- In our laboratory much research has proved that musical vibrations increase the In Vitro Fertilisation rate by 5%. This is the reason for having music systems built in our incubators.

- We have developed a new system called Embryomobile, which allows patients to watch the evolution of their embryos inside the Embryoscope –an incubator with cameras– from home.

• Constant innovation to improve treatments and results.

Would you like to increase your chances of pregnancy?

With over 95 years of history, at Institut Marquès we offer the latest treatments in Assisted Reproduction, with cutting-edge techniques and a personalised service to meet the patient's needs.

We provide the Preimplantation Genetic Diagnosis (PGD) which allows the detection of genetic anomalies in the embryo and therefore transfer the best embryo to the uterus.

We transfer one embryo on the 5th day of culture (blastocyst), as this technique increases the implantation rate and reduces the number of multiple pregnancies.

- 89% success rate per cycle of In Vitro Fertilisation with Egg Donation.
